Professional Summary

Full Stack MERN Developer with 3+ years of hands-on experience designing and developing scalable web applications across AI Hiring, EdTech, Event Management, and FinTech domains. Experienced in building production-grade React.js and Next.js applications, secure Node.js APIs, real-time communication using Socket.IO, and optimized MongoDB data models. Strong expertise in designing reusable frontend architectures, implementing authentication and authorization, developing RESTful services, writing aggregation pipelines, integrating AI services, and optimizing application performance. Passionate about building maintainable software following clean architecture, scalable design patterns, and Agile development practices.

Core Skills

- Frontend: React.js, Next.js, JavaScript, TypeScript, Redux Toolkit, Tailwind CSS, Shadcn/UI, Material UI.
- Backend: Node.js, Express.js, REST APIs, JWT Authentication, WebSocket - Socket.IO, Redis, Jest, Unit testing.
- Database: MongoDB, Mongoose, Aggregation Pipeline, Query Optimization, Schema Design, Indexing.
- DevOps & Cloud: AWS (EC2, S3), Docker, Cloudinary, Github, Git.
- AI Tools & Developer Productivity: Open AI, Copilot, Claude, DeepSeek, Prompt Engineering.
- Testing: Postman, Jest, API Testing.
- Development Practices: Agile, Scrum, Code Review, CI/CD, Performance Optimization.

Professional Experience

R1 RCM

Full Stack Developer (MERN)

2023 – Present

- Designed and developed scalable frontend applications using React.js, Next.js, TypeScript and Redux Toolkit following component-based architecture..
- Built secure REST APIs using Express.js with JWT authentication, role-based authorization, request validation and centralized error handling.
- Designed MongoDB schemas, aggregation pipelines and optimized queries to improve application performance.
- Implemented reusable React components, custom hooks and shared UI modules improving development efficiency across projects.
- Developed real-time communication systems using **Socket.IO** for live messaging, interview synchronization and collaborative features.
- Wrote unit tests using Jest for controllers, services, utility modules and business logic to improve application reliability and reduce regression issues.
- Participated in sprint planning, peer code reviews, requirement discussions and production deployments following Agile methodologies.

R1 RCM

Technical Support Analyst |

2020 – 2023

- Provided support for Cerner Practice Management (Millennium) and resolved technical issues.
- Investigated and resolved production issues while coordinating with business and technical stakeholder

Professional Projects

AI Hiring Platform – AI Interview System

- Developed an AI-powered interview platform enabling automated technical interviews between candidates and AI interviewers.
- Integrated OpenAI Speech-to-Text and Text-to-Speech APIs to support natural voice-based interview experiences.
- Built backend interview orchestration services for candidate session management, interview scheduling and response evaluation.
- Designed Socket.IO based real-time communication allowing AI interview agents and candidates to exchange live voice events, interview status updates and synchronized interview sessions with minimal latency.

- Implemented room-based Socket.IO architecture for managing interview sessions, event broadcasting, reconnection handling and real-time session synchronization.
- Developed MongoDB aggregation pipelines for interview analytics, candidate reports and dashboard metrics.
- Implemented Redis caching to reduce repeated database reads and improve API response times.
- Developed Jest unit tests for interview services, utility modules and business logic ensuring stable deployments and easier regression testing.

EdTech – MERN LMS Platform

- Developed modules for Course Management, Batch Management, User Management and Student Progress Tracking.
- Designed secure REST APIs supporting authentication, enrolment workflows, attendance and course delivery.
- Built Socket.IO powered real-time classroom chat enabling instant communication between teachers and students during live sessions.
- Implemented role-based access for Students, Teachers and Administrators.
- Improved frontend performance through reusable components, lazy loading and optimized API integration.
- Optimized MongoDB queries and aggregation pipelines for reporting and dashboard modules.

FinTech – Loan Processing Platform

- Developed secure loan processing workflows supporting customer onboarding, loan verification and application management.
- Designed REST APIs with proper validation, authentication and authorization. • Implemented MongoDB ACID Transactions ensuring consistency across multi-step loan approval processes.
- Developed reusable React components improving consistency across multiple application modules.
- Implemented MongoDB transactions following ACID principles to ensure data consistency and reliability across multi-step loan processing workflows.

Education

- MCA – GITAM University
- BCA – Punjab Technical University
